Let's rename this project by clicking where it says "untitled" and rename your file "Section 3".

Click the arrow pointer next to the words “Page 1” on the left side of the interface. This will expose the pages in the document. Right now only “Page 1” is part of this document. Double click the words “Page 1” and rename the page “Mobile”. Using the + sign to the right of the word pages, add two more pages and rename them “Tablet” and “Laptop”. Click the mobile page so it’s selected.

Ensuring that you still have the mobile page selected, click the arrow next to the Frame icon in the top row of tools. Select "Frame" from the dropdown list.

Repeat the process for the tablet and laptop pages in your document. For tablet, select the iPad Pro 11. For laptop, use the Desktop category and choose the “MacBook Pro”.

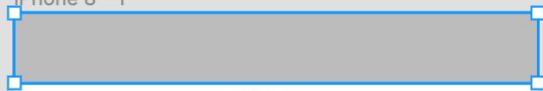

Return to the “tablet” page. If the iPad frame appears to be in portrait orientation (taller than it is wide) rotate it. You’ll accomplish this by clicking on the border of the frame to select it and selecting the landscape orientation (wider than it is tall) from the context-sensitive properties panel.

Switch back to the mobile page. Create a rectangle that is exactly 375 x 50 and place it is precisely aligned with the top and left side of the device frame.

You may use the fill tool in the properties panel to color it any way that you'd like.

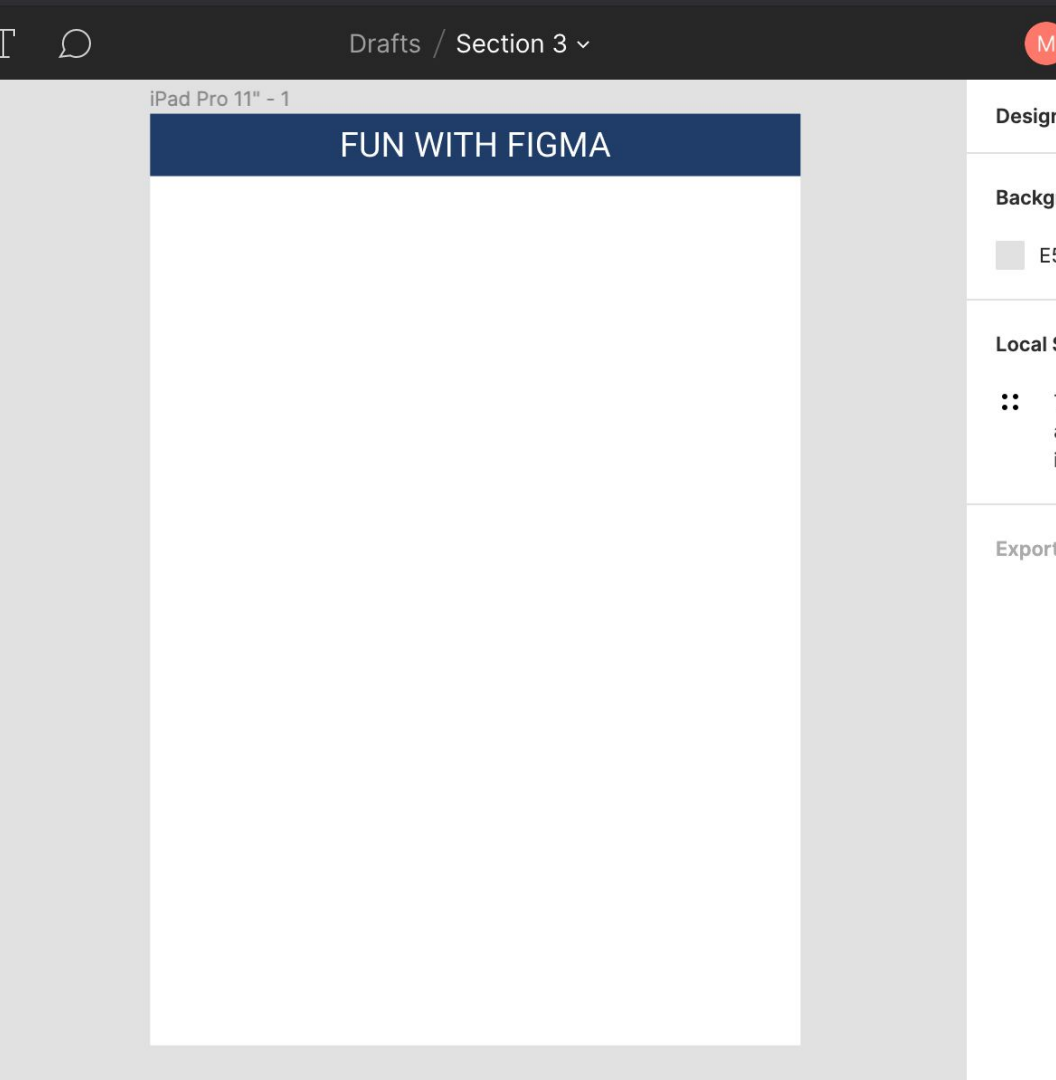

Switch to the text tool. Using the text tool, drag a box in the approximate same size and position as the background box you created in the previous step. Type the text “FUN WITH FIGMA” in to the text box.

Use the properties panel to experiment with font, color and size until the text looks the way you prefer.

In the layers panel, hold the shift key and click both the FUN WITH FIGMA text layer and the Rectangle.

When both items are selected click the “Create Component” button which looks like four diamonds and is directly above the iPhone Frame in your interface. Once the component is created, click the tick mark to the left of the words “Component 1” in your layers panel. Double click to rename Component 1, “Header”.

Switch back to the Tablet page and repeat the process to create a header that is exactly 835 x 80 and precisely aligned to the top and left-hand side of the page.

Select both the rectangle and the text in the layers panel. Click the “create component” button and rename the component “Tablet Header” once it’s created.
